CHAPTER V

STATISTICS OF PUBLIC-SCHOOL LIBRARIES, 1934-35

This report includes library statistics for both public elementary and high schools for the school year 1934-35. The data are based upon replies to a questionnaire, which was sent to 6,327 superintendents of city and county public schools in continental United States. The items listed on the form called for replies representing totals for all of the schools under the supervision of the superintendents rather than for individual schools. In two instances, Delaware and North Carolina, data were supplied by officials in State departments of education.

Since the titles of administrative heads of rural school systems vary somewhat in the different States, the term, "county superintendent," for purposes of this report, includes county examiners in Arkansas, parish superintendents in Louisiana, district superintendents in New York and Utah, county commissioners in Michigan, division superintendents in Virginia, union or district superintendents in the New England States, and the State superintendent in Delaware for all schools outside of Wilmington.

DISTRIBUTION OF SCHOOL SYSTEMS

At the time the questionnaires were sent, 2,901 of the 6,327 school systems in the United States were designated as city systems; 3,180 as county, with rural schools only; and 246 as county unit systems, that is, systems in which both rural and urban schools are under one administrative head. The total number of usable replies received for the three types of school systems is indicated in the following table:

TABLE I.—DISTRIBUTION OF COLOUR SYSTEMS BY TYPES AND NUMBER AND PERCENT REPORTING, 1934-35

Major statistical work done by Mary, Ella W. Banfield and Mary M. Willhoite, statistical clerks.

Other publications of this Office containing statistical data on school libraries are given on page 195

The 2,901 city school systems are subdivided into four population groups, based upon figures given in the 1930 census. Group I includes 90 cities having a population of 100,000 or more; Group II, 220 cities having a population of 30,000 to 99,999; Group III, 647 cities having a population of 10,000 to 29,999; and Group IV, 1,944 cities having a population of 2,500 to 9,999.

The percentage of usable replies returned by the superintendents of the smaller cities (Group IV) exceeds the percentages returned by the superintendents of the other three groups. The number of usable replies returned by Group IV cities is 73.71 percent of the total number of Group IV cities. For the other three groups of cities, the percentages are: Group I, 68.89; Group II, 68.64 and Group III, 69.71 of the respective number of cities in each group (table 1).

According to comments received with the questionnaires it is indicated that the principal sources of classroom collections are school and public libraries. Some instances are reported in which a centralized library in one school building furnishes collections of books to classrooms in other buildings; for example, an Indiana city reports that the library in the high-school building supplies classroom collections to an elementary-school building. Some city school systems report that classroom collections in elementary schools are furnished by centralized libraries maintained in offices of city boards of education.

Centralized libraries in the offices of county superintendents of schools frequently supply classroom collections to rural schools. States in which such libraries are reported are Alabama, Arizona, Arkansas, Colorado, Illinois, Indiana, Kentucky, Maryland, Michigan, Nebraska, New Mexico, North Dakota, Ohio, South Carolina, South Dakota, Tennessee, Texas, Utah, Washington, and Virginia. Some details regarding this service are noted in the following digests of comments made by county superintendents:

We have a centralized library in connection with our office. The teachers come to the office once in two weeks for the purpose of withdrawing 15 or 20 books for their schools. (Arizona.)

County board of education owns a traveling library of 91 sets consisting of 10 books each. (Kentucky.)

One central library in my office serves all 30 schools under my supervision. (New Mexico.)

All library books are placed in the county superintendent's office. When the schools open in the fall, the teachers withdraw 25 books and exchange them for others when they are through with them. (SOUTH DAKOTA.)

Our county circulating library supplies 91 school districts in the county. (TEXAS.)

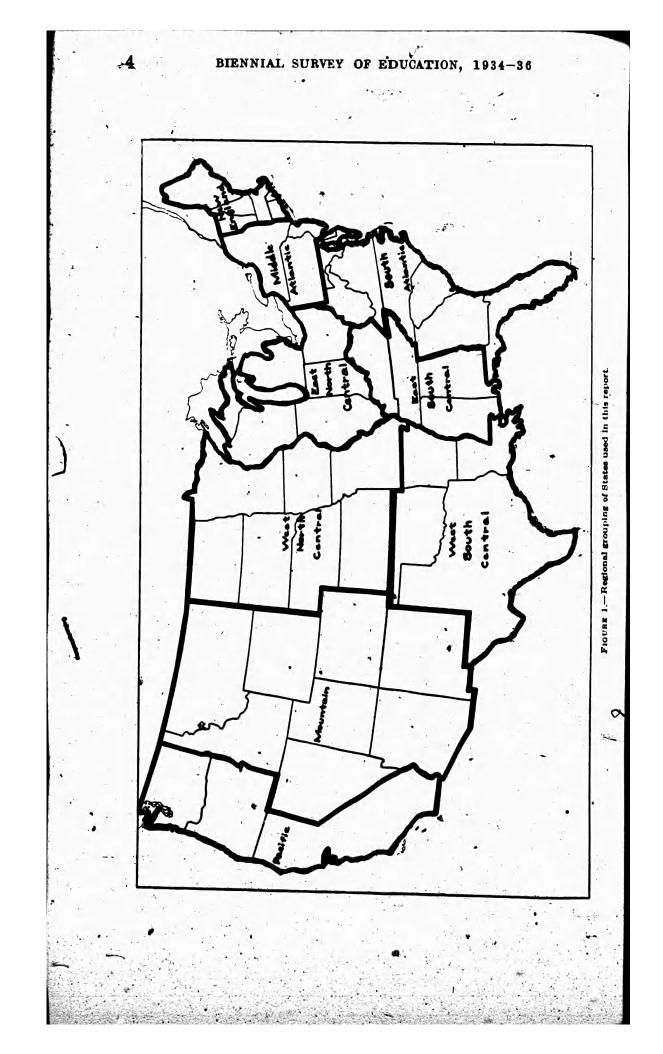

Most of the superintendents of California counties reporting say that the library collections in the schools under their supervision are supplied by county libraries. In that State 47 of the 58 counties have county library service. Other States in which county superintendents stated that their classroom collections are supplied by county libraries are Alabama, Indiana, Kentucky, Maryland, Minnesota, Montana, New Jersey, New York, Ohio, Tennessee, Texas, Washington, Wisconsin, and Wyoming. Other types of public libraries supplying schools with classroom collections are libraries maintained by towns (New England), townships, and municipalities.

Comparisons by geographical regions are for the total number of school systems reporting. No comparisons are made by regions for the three types of school systems—city, county, and county unit (urban and rural) either in the regional tables in the text or in the regional summaries.

SCHOOLS SERVED BY LIBRARIES

The total number of schools in the 3,130 school systems reporting is 66,101. Of this number, 61,303 or 92.74 percent, are served either by centralized libraries or by "classroom collections only." It must not be assumed, however, that the remaining half of the school systems in the United States not reporting have similar library service. This percentage applies only to those schools reporting and not to the Nation as a whole. It is highly probable that library facilities of many of the schools not reporting were either non-existent or very limited.

In tabulating the data, a centralized library was interpreted as a school's permanent collection of books assembled usually in one place in the building. A collection of books in a classroom, loaned to it temporarily from a library outside the building or a permanent collection for a particular classroom only (except in a 1-teacher school) was interpreted as a classroom collection.

More schools are served by "classroom collections only" than by centralized libraries for 50.63 percent of all of the schools reporting were served by the former and 42.11 percent by the latter. This situation prevails not only for the total number of schools in all three systems combined (city, county, and county unit), but for the schools in each of the systems. The percentages of the total number of schools in each of the respective school systems served by "classroom collections only" and by centralized libraries follow: City, 46.10 "classroom collections only" and 43.45 centralized libraries; county (rural only), 52.41 "classroom collections only" and 41.84 centralized libraries; and county unit (urban and rural), 49.25 "classroom collections only" and 39.71 centralized libraries (table III).

TABLE III.—NUMBER OF SCHOOLS IN SYSTEMS REPORTING AND NUMBER AND PERCENT SERVED BY CENTRALIZED LIBRARIES AND BY CLASSROOM COLLECTIONS ONLY, 1934-35

PUPILS SERVED BY CENTRALIZED LIBRARIES

The total enrollment in the 66,101 schools for the three types of school systems reporting is 12,501,017 pupils. Of this number, 7,209,674, or 57.67 percent of the entire number of pupils enrolled in the three school systems combined, are served by centralized libraries. The percentage of the total number of children in city school systems served by centralized libraries is somewhat larger than the percentage of the total number of children served by such libraries in each of the county systems, as indicated in the following table:

TABLE V.—NUMBER AND PERCENT OF PUPILS SERVED BY CENTRALIZED LIBRARIES IN SCHOOL SYSTEMS REPORTING, 1934-35

	System		Total enroll-	Enrollment	served 1
			ment	Number	Percent
	1	* *	. 2		* *
City County (rural on County unit (uri	ly) pan and rural)		8, 826, 452 3, 231, 324 443, 241	5, 189, 648 1, 775, 010 -245, 016	58. 86 54. 90 55. 20
Total:	3		12,501,017	7, 209, 674	57.6

1 This is the enrollment served by centralized libraries only. No data are available on the additional number served by classroom collections.

By comparing tables III and V, it is noted that while 50.63 percent of the schools reporting had "classroom collections only," 57.67 percent of the pupils in the schools reporting are served by centralized

libraries. This may be accounted for by the fact that schools served by centralized libraries usually have larger enrollments than those served by "classroom collections only.".

¹ This is the enrollment served by centralized libraries only. No data are available on the additional number served by classroom collections.

SIZE OF CENTRALIZED LIBRARIES

The superintendents were requested to report the number of centralized libraries of various sizes, in number of volumes, for schools of six educational levels. The sizes of the libraries, in number of volumes, were requested in groups as follows: Fewer than 500; 500 to 999; 1,000 to 2,999; 3,000 to 4,999; 5,000 to 9,999; 10,000 or more. It was explained on the form that in interpreting the word "volume," the definition of the American Library Association was to be used which is: "a printed work bound in stiff covers so as to stand on a shelf; also an unbound book of over 100 pages, or an unbound book of less than 100 pages if cataloged, accessioned, and treated as a volume in all respects."

The six educational levels into which the schools were distributed follow: Elementary school only, elementary and junior high school only, junior-senior high school, senior or regular high school only, elementary and all high school.

The total number of centralized libraries is 27,836, which is the same as the number of schools reporting such libraries (table III). In interpreting the data it was considered that there was only one centralized library to a school. The total number of volumes in the 27,836 centralized libraries is calculated to be 28,346,250. Thirty-one percent of the total number of volumes (8,750,000) is found in libraries containing from 1,000 to 2,999 volumes; this is the largest number of volumes reported for any one of the groups of libraries.

The second largest number of volumes (5,076,000), which is 18 percent of the entire number, is found in the group of libraries containing from 3,000 to 4,999 volumes. The smallest number of volumes (2,112,000), or 7 percent of the entire number, is in the group of libraries containing 10,000 volumes or more. Fifteen percent of the total number of volumes (4,276,000) is in libraries of less than 500 volumes (table VII).

TABLE VII.—NUMBER AND PERCENT OF VOLUMES IN CENTRALIZED LIBRARIES IN SCHOOLS REPORTING, 1934-35

	Size of library	Volumes in co	entralized es
		Number	Percent
Fewer than 500 vo 500 to 999 volumes 1,000 to 2,999 volumes		4, 276, 000 3, 189, 750	1 1
3,000 to 4,999 volum 5,000 to 9,999 volum 10,000 volumes or 1	1065	8, 750, 000 5, 076, 000 4, 942, 500 2, 112, 000	3 1 . 1
Total		28,346, 250	10

Calculated at 250 each.
Calculated at 12,000 each.

The size of the median centralized library for all school systems reporting is 407 volumes. The median-sized library in volumes for each of the three types of school systems is: City, 1,377; county (rural only), 333; county unit (urban and rural), 350. Table VIII gives the averages as well as the medians. The averages are considerably larger than the medians due to the fact that three is a large number of schools with small libraries. For this reason, the medians are more representative figures (table VIII).

TABLE VIII. DISTRIBUTION OF CENTRALIZED LIBRARIES BY SIZE IN 1934-35 FOR SCHOOL SYSTEMS REPORTING

•					Sys	tem	*
	Bise			Oity	County (rural only)	County unit (urban and rural)	Total
	1	•		1	•	4	
Fewer than 500 volumes			1, 678 1, 468 2, 358 954 572 154	14, 259 2, 572 1, 818 278 76 16	1, 167 213 199 40 11 6	17, 10 4, 25 4, 37 1, 20 68 17	
Total Median size Average size				7, 184 1, 377 2, 254	19, 016 833 578	1,636 350 711	27, 83 40 1, 01

Since the size of the median centralized library in seven of the nine geographical regions was fewer than 500 volumes, no medians are given in table IX. In the New England region, the median-sized library was 534 volumes and in the Pacific region, 711 volumes. The average size of the centralized library for schools reporting for Continental United States is 1,018 volumes. The averages for the regions range from 701 in the West North Central to 1,919 in the Pacific (table IX).

TABLE IX.—AVERAGE SIZE OF CENTRALIZED LIBRARIES IN 1934-35 FOR SCHOOL SYSTEMS REPORTING, BY REGIONS .

Region	Average size in solumes
New England, Middle Atlantic East North Central	1 147
Middle Atlantic	1 070
East North Central	1,070
West North Central	1,051
South Atlantic	701
South Atlantic	912
East South Central	929
West South Central	1. 149
Pacific	1 010
	1, 919
Continental United States	1 018

Table X shows the number and percentage distribution for the 27,836 centralized libraries by size of library and by educational level for schools reporting. A study of this table shows that 92.4 percent of all of the centralized libraries in the three types of school systems reporting, number fewer than 3,000 volumes—61.4 percent contain fewer than 500 volumes, 15.3 percent from 500 to 999 volumes, and 15.7 percent from 1,000 to 2,999 volumes. Only 4.6 percent of the total number of libraries contain from 3,000 to 4,999 volumes; 2.4 percent from 5,000 to 9,999 volumes; and less than 1 percent have 10,000 or more volumes.

The number of centralized libraries in schools of elementary school level is 18,537. This is approximately two-thirds of the total number of centralized libraries reported for schools of all six educational levels. Most of the small libraries are found in schools with elementary grades only—15,053 out of the 17,104 libraries of fewer than 500 volumes. In schools of this educational level, 81.2 percent of all of the libraries contains fewer than 500 volumes; 11.1 percent of the total number have from 500 to 999 volumes; and 6.5 percent, from 1,000 to 2,999 volumes. Only a little more than 2 percent of all of the libraries in schools with elementary grades only contain more than 3,000 volumes.

In schools of elementary and junior high school level, most of the centralized libraries contain fewer than 3,000 volumes. The percentage of the total number of libraries in schools of this educational

level that have fewer than 500 volumes is 37.6; 500 to 999 volumes, 32.8; and 1,000 to 2,999 volumes, 20.4. Only 9.2 percent of the total number of centralized libraries in schools of elementary and junior high school level contain more than 3,000 volumes.

In schools of junior high school level, the largest number of centralized libraries is in the size group containing from 1,000 to 2,999 volumes. This number, which is 462 libraries, is 44.1 percent of the total number of libraries reported for junior high schools. The number of libraries with fewer than 1,000 volumes is 332, or 31.7 percent of all of the libraries reporting for schools of this educational level; with more than 3,000 volumes, the number is 254, or 24.2 percent of all the libraries reporting.

In schools of junior-senior high school level, the largest number of centralized libraries falls in the size group containing from 1,000 to 2,999 volumes. This number, which is 559 libraries, is 43.6 percent of the total number of libraries reported for junior-senior high schools. The number of libraries with fewer than 1,000 volumes is 370, or 28.9 percent of all the libraries reporting for schools of this educational level; with more than 3,000 volumes, the number is 354, or 27.5 percent of all the junior-senior high school libraries reporting.

77906*-38----

In schools of senior or regular high school level, as in schools of junior high school and junior-senior high school levels, the largest number of centralized libraries is in the size-group containing from 1,000 to 2,999 volumes. This number, which is 934 libraries, is 35.2 percent of all the libraries in schools of senior or regular high-school level. There are more centralized libraries with more than 3,000 volumes in schools of this educational level than in any other one of the six levels; the number is 915 libraries, or 34.5 percent of all libraries

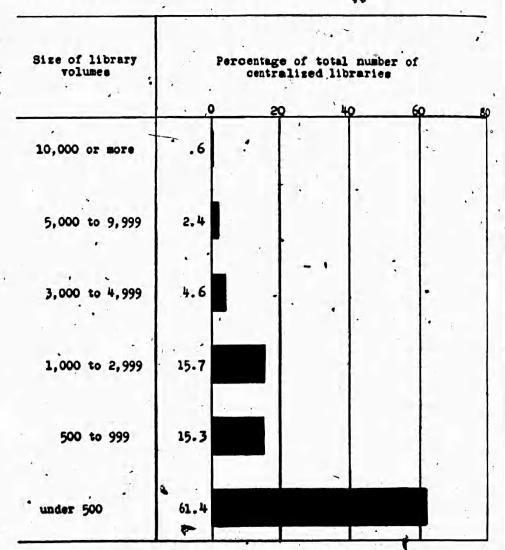

Figure 2.—Percentage distribution of centralised libraries, 1984-35.

in senior or regular high schools. There are 498 libraries, or 18.8 percent of the total number of libraries in senior or regular high schools with from 3,000 to 4,999 volumes; 321 libraries, or 12.1 percent with from 5,000 to 9,999 volumes; and 96 libraries, or 3.6 percent, with more than 10,000 volumes. The number of libraries of fewer than 1,000 volumes in schools of this educational level is 801, or 30.3 percent of all the senior or regular high school libraries reporting.

In schools of elementary and all high-school levels, most of the libraries are found in the three size-groups with fewer than 3,000 volumes; 1,072 libraries, or 30.4 percent of the total number of elementary and all high-school libraries, contain fewer than 500 volumes; 1,130 libraries, or 32.1 percent, contain from 500 to 999 volumes and 1,055 libraries, or 29.9 percent, contain from 1,000 to 2,999 volumes. Only 268 libraries, or 7.6 percent of the total number of libraries in schools of elementary and all high-school levels, contain more than 3,000 volumes. Many of the centralized libraries in schools of this educational level are found in county school systems.

Table XI shows the number and percentage distribution of centralized libraries by size of library for schools reporting for the nine geographical regions. The percentage distribution for schools of the various educational levels is not given because of the small number of schools with libraries numbering more than 500 volumes.

The average number of volumes in centralized libraries per child molled during the school year 1934-35 for the three types of school ystems combined is 3.93. For individual systems, the average

number of volumes is: city, 3.12; county (rural only), 6.19; and county unit (urban and rural), 3.94 (table XII).

	And the second second second	

Low average is probably due to the fact that the smaller schools supplement their own collections of books in centralized libraries with those which they borrow from town libraries.

Continental United States

NUMBER OF VOLUMES ADDED TO CENTRALIZED LIBRARIES, 1934-35

Nearly two million (1,901,228) of the 28,346,250 volumes calculated to be found in centralized libraries were added during the school year 1934-35, according to reports secured from the superintendents. The numbers for each of the three types of school systems are: City, 1,312,272 volumes; county (rural only), 508,803 volumes; and county unit (urban and rural), 80,153 volumes.

For the schools reporting, the number of volumes added per library for the three types of school systems combined during the school year 1934-35 is 68. The number of volumes added per library is greater for city than for county schools systems; numbers for the three types of school systems are: City, 182 volumes; county (rural only), 27 volumes; and county unit (urban and rural), 49 volumes.

The number of volumes added to centralized libraries during the school year 1934-35 amounted to practically one-quarter of a book per pupil enrolled. The data are given in table XIV.

TABLE XIV.—NUMBER OF VOLUMES ADDED TO CENTRALIZED LIBRARIES IN 1934-35 FOR SCHOOL SYSTEMS REPORTING

The number of volumes added to centralized libraries during the school year 1934-35 for school systems reporting is given in table XV for the nine regions: The largest number of volumes added per library by any one region is 239 for the Pacific region, which was half a book per child enrolled.

LIBRARIANS IN CENTRALIZED LIBRARIES

The only information requested on the questionnaire, under the item "librarians," was to indicate the number full time and the number part time. In a few instances the superintendents gave the numbers for the two types, but included a certain number of clerical assistants which they specified. These clerical assistants were not eliminated because it was impossible to tell how many other superintendents had included such assistants, but had not specified the number. No personnel definition was set up on the questionnaire for the position of librarian.

Librarians reported were 12,578 which indicates that less than half of the 27,836 centralized libraries have librarians either on fullor part-time service. Some superintendents who reported no librarians evidently did not consider teachers giving part of their time to the administration of centralized libraries as part-time librarians. In practically all small rural schools teachers act as librarians. In a few States the laws provide that teachers in such school shall serve as librarians. Wisconsin is one State with such legal provisions; in order that rural teachers in that State may qualify as librarians the teacher-training institutions provide certain elementary courses in library technique. / .

The reports show that 3,808 of the 12,578 librarians serve full time and 8,770 part time. The number of full-time librarians in city school systems is 2,926; in county systems (rural only), 806; and in county unit systems (urban and rural), 76. The 8,770 parttime librarians are divided among the three school systems as follows: City, 3,593; county (rural only), 4,886; and county unit (urban and rural), 291 (table XVI).

For both city and county unit (urban and rural) school systems, the largest number of full-time librarians is found in schools of senior or regular high-school educational level. In city school systems, the number of full-time librarians reported for schools of senior or regular high-school level is 42.3 percent of all of the full-time librarians in such systems. In county unit (urban and rural) school systems, the number of full-time librarians reported for schools of senior or regular high-school level is 36.9 percent of all the full-time librarians in such systems. In the county systems (rural only), the largest number of full-time librarians is found in schools of elementary school level; this number represents 43.8 percent of all of the full-time librarians in county systems with rural schools only.

In city and county unit (rural only) systems, the largest number of part-time librarians are in schools with elementary grades only; for the city school systems the percentage is 45.4 of all of the parttime librarians reported for such systems; and for the county systems (rural only), the percentage is 52.7 of all of the part-time librarians reported. In the county unit school systems (urban and rural), the largest number of part-time librarians is found in schools of senior or regular high-school educational level; this is 32 percent of all of the part-time librarians reported for county unit systems. Percentages for part-time librarians for schools of other educational levels

are given in table XVI.

TYPES OF CENTRALIZED LIBRARIES

The superintendents were requested to distribute the total number of centralized libraries reported by types as follows: Public libraries, branch public libraries, school libraries open to the public, and school libraries not open to the public. This distribution is indicated in table XVIII.

The prevailing type of centralized library is a school library not open to the public. Of the entire number of libraries reported for all school systems, 19,581, or 70.3 percent, are of this type. Percentages of the total number of libraries in each of the respective school systems that are not open to the public are: City, 87.5; county (rural only), 63.2; and county unit (urban and rural), 77.9.

The number of school libraries open to the public is 7,644, or 27.5 percent of the total number of libraries in all school systems reporting. Percentages of the total number of school libraries for each of the respective types of systems reporting that are open to the public are larger for the two types of county school systems than for the city systems. In the county (rural only) systems, 35.4 percent of all the libraries are open to the public; in the county unit (urban and rural) systems, 22.1 percent of all of the libraries; and in the city systems, 7.6 percent of all of the libraries.

TABLE XVIII.—DISTRIBUTION OF CENTRALIZED LIBRARIES BY TYPE OF LIBRARY IN SCHOOL SYSTEMS REPORTING, 1934-35

An examination of the regional distribution of the centralized libraries by type (table XIX) shows that for the continental United States, less than 1 percent of the centralized school libraries are public libraries and 1.6 percent branch public libraries; the percentage of centralized school libraries open to the public is \$7.5; the percentage of school libraries not open to the public is 70.3.

ADMINISTRATIVE CONTROL OF CENTRALIZED LIBRARIES

Compilation of the data requested on types of administrative control of centralized libraries shows that 96.5 percent of the 27,836 libraries in the three types of school systems combined are under the control of school boards; 1 percent, public library boards; 2.3 percent, a combination of school and public library boards and 0.2 percent "other boards." Explanations of the term "other boards" indicate that in the majority of cases they are councils of local parent-teacher associations; some other organizations and institutions responsible for the administration of school libraries are women's clubs, college libraries, State teachers colleges, and high-school alumni associations.

The most frequent examples of administrative control by a combination of school and public library boards are found in city school systems. The number of centralized school libraries in city school systems controlled by a combination of school and public library boards is 378 or 5.3 percent of all of the libraries reperted by such systems; numbers and percentages for the two types of county school systems are given in table XX.

INCOME FOR SCHOOL LIBRARIES

Since data on income include all funds for school libraries handled by school authorities, moneys received for classroom collections, as well as for centralized libraries, are included. The superintendents were requested to give the total incomes for school libraries for the school year 1934-35. They were asked also to itemize the total incomes showing the amounts received from local school funds; State school or library funds, public library funds, and other sources.

In reporting the items, some of the superintendents gave the total incomes but did not indicate distribution as to sources. For this reason, the amounts given in the column headed "total income," in table XXII are somewhat larger than the sum of the amounts distributed as to sources. The percentages in table XXII are computed upon the actual sums of the amounts distributed as to sources. It is assumed that the distribution of the total incomes as to sources would be the same proportionately for those not indicating the distribution as for those that did.

In the county unit school systems, as reported in table XXII, the 35.9 percent derived from local school funds and the 41 percent from county funds may be considered as one item, making a total of 76.9 percent from local sources. By way of explanation, some county unit (urban and rural) school districts are divided into sub-taxing districts and some are not. For purposes of this study, counties which are not divided into subtaxing districts, were considered local districts. Some of the superintendents of such counties reported money received for libraries from county-wide sources as local funds; others reported such money as county funds. The number of superintendents reporting from counties with subtaxing districts was almost negligible.

The county (rural only) and the county unit (urban and rural) school systems receive a larger proportion of their school library funds from State school or library funds than do city systems. This is to be expected for State funds are frequently granted to school districts that are unable to raise sufficient funds to maintain the educational standards set up by the States and a large number of poor districts are located in rural areas.

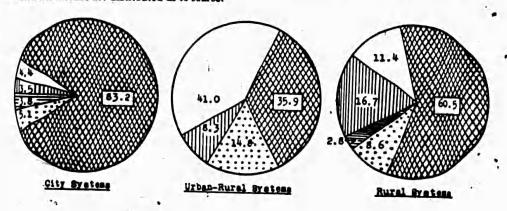

Income from public library funds is reported by superintendents of school systems in which school and public library boards have entered into agreements whereby library service for schools is furnished cooperatively by the two agencies. For the school systems reporting, this arrangement is evidently more common in city than in county school systems.

Figure 5.—Percentage distribution of school library income by source, 1994-25.

Income for school libraries received from sources not designated on the form was reported under the item "other sources." Percentages of the total incomes received for school libraries by city and county (rural only) school systems which come from "other sources" are given in table XXII. Income reported under "other sources" represents money donated by parent-teacher associations, women's clubs, and other organizations interested in the welfare of the schools, school clubs, school classes, and faculty members.

For the schools reporting, the local school district is the source of most of the income for school libraries for all of the regions as well as for the United States (table XXIII). It has been pointed out that the approximate percentage of funds received for school libraries from local school funds in county unit (urban and rural) school systems includes the amounts received from "local school funds" and from "county funds." This would tend to increase the amount received from local school funds in the regions containing county unit school systems.

EXPENDITURES FOR SCHOOL LIBRARIES

Since data for expenditures like that for income include all expenditures for school libraries handled by school authorities, expenditures for classroom collections, as well as for centralized libraries, are bluded. The superintendents were requested to report the total expenditures for school libraries for the school year 1934-35. They were also asked to distribute the total expenditures as to purposes, such as books and pamphlets, periodicals, binding and rebinding, salaries and equipment.

In reporting the items some of the superintendents gave the total expenditures but did not indicate their distribution as to purposes. For this reason, the amounts given in the column "total expenditures" in table XXIV are somewhat larger than the sum of the amounts distributed as to purposes. The percentages in table XXIV are computed upon the actual sums of the amounts distributed as to purposes. It is assumed that the distribution of the total expenditures as to purposes would be the same proportionately for those not indicating the distribution as for those who did.

The portion of the total amount expended for books and pamphlets by each of the two types of county school systems is greater than the portion of the total amount expended by the city school systems for this purpose.

The reason for this is probably due to the fact that public library resources are more prevalent in urban than in rural areas, thus making it possible for schools in urban areas to spend a proportionately smaller amount of their school library budgets for books and periodicals since they may utilize public library facilities. Furthermore, the fact that the larger schools in cities employ full-time librarians makes the proportion of the school library budget spent for books smaller than in places where little is spent for salaries. This is shown in table XXIV. It is noted in the discussion of the section on the administrative control of school libraries that instances in which library service for schools is administered cooperatively by school and public library boards are more numerous in city than in county school systems (table XX).

The amount expended for periodicals by all systems represents 3.5 percent of the total expenditure for school libraries for these systems. Since a number of the superintendents explained that in their school systems, expenditures for periodicals are not separated from those for books and pamphlets, this figure is smaller than the real amount spent, therefore, it seems best to combine the two items. If this is done, the total expenditures for "books, pamphlets, and periodicals" is \$2,468,466, or 37.3 percent of the total expenditures for school libraries for all school systems reporting these expenditures.

Includes items not distributed as to purpose of expenditure.

Another item that seemed difficult to report was that showing expenditures for binding and rebinding of school library books. Some superintendents stated that most of the binding for such books is done in their own school binderies which are connected with their

print shops and that costs for binding and printing are not segregated. Some reported that this work was done by relief workers. In one instance, school library fines were used in paying for binding. The amount reported for binding and rebinding for all school systems in table XXIV is 3.3 percent of the total expenditures for school libraries for these school systems.

Legend:

Books, pamphlets and periodicals
Binding and rebinding
Salaries
Equipment

Equipment

FIGURE 6.—Percentage distribution of school library expenditures by purpose, 1934-35.

When it came to indicating the amounts expended for salaries, another difficulty was encountered because salaries for librarians are included frequently in teachers' salary budgets. It was explained in a number of cases that in elementary schools, particularly those in which the platoon type of organization prevails, librarians are teachers. For all systems, the amount reported for salaries is 56.3 percent of the total expenditures for school libraries.

Expenditures for all purposes not designated on the form are tabulated under the item "all ther purposes" in table XXIV. Amounts spent by each of the school systems reporting for equipment and "all other purposes" are given in table XXIV.

Includes 5,190 enrolled in 2 junior colleges.
Includes 259 enrolled in 1 junior college.
Includes 5,440 enrolled in 3 junior colleges.
Supervisory districts.
Includes 1,044 enrolled in 2 teacher-training institutions.

All of Delaware but Wilmington.
7 Includes 160 enrolled in 1 junior college.
9 Includes 458 enrolled in 1 junior college.
9 Parishes.
9 Includes 413 enrolled in 2 junior colleges.

Includes 375 enrolled in 1 junior college.
 Includes 36 enrolled in 2 teacher-training institutions.
 Only distribution possible.
 Includes 174 enrolled in 1 teacher-training institution.
 And districts.

APPENDIX

(Form used in collecting data)

UNITED STATES

DEPARTMENT OF THE INTERIOR

OFFICE OF EDUCATION

WASHINGTON

To the Superintendent of Schools:

Our library statistics for 1929 showed that the number of school libraries of 3,000 or more volumes increased 100 percent from 1923 to 1929. It is again time to collect data on the school library so that educators may judge how effectively this institution is supplementing the work of the school.

For 1934-35 we are attempting to collect information on school libraries of all sizes, not by individual schools but by totals for all those schools under the administration of each superintendent.

We will greatly appreciate your filling in the information called for below. You may use the enclosed envelope, which requires no postage, in returning the blank.

Cordially yours,

BESS GOODYKOONTZ,
Assistant Commissioner of Education.

Enclosure.
